Summary

Dynamic Full Stack Developer with a Master's Degree in Computer Engineering and experience building full-stack web applications using React, Angular, Next.js, Express.js, NestJS, PHP and TypeScript. Experienced in a digital agency environment, including client meetings to gather requirements, providing technical support to customers, and developing and maintaining production websites. Skilled in working with databases such as MongoDB and PostgreSQL. Strong ability to quickly learn and apply new technologies through both professional and personal projects, while leveraging the power of AI to efficiently build and scale innovative systems.

Work Experience

Full-Stack Developer - imonline (Hybrid)

Feb 2023 - Present

Imonline is a digital marketing agency. In my role, I developed and maintained websites using PHP, HTML, and CSS, focusing on functionality and responsive design. I also provided telephone and online technical support to clients, assisting with technical issues and website-related requests, and communicating directly with customers to ensure smooth service operation. Additionally, I held meetings with clients to understand their needs and requirements for the creation of their websites.

Sites:

- **Melba Salt & Sugar**

A website for a sweets shop, offering visitors information about the menu.

Website: <https://www.melba.gr/en>

- **Sunterra**
A vacation rental website that allows users to browse and book holiday homes. The platform showcases available properties with detailed descriptions and photos, making it simple for visitors to find and reserve accommodations. **Website:** <https://www.sunterra.gr/>
- **Diore beauty**
A booking website for a beauty salon in Heraklion, allowing customers to schedule appointments for services such as manicure, pedicure, and other treatments.
Website: <https://www.diorebeauty.gr/>
- **Avelia Villa**
A vacation villa website that presents photos of the villa and information about its facilities. Visitors can explore activities available in the surrounding area and make a booking for the villa.
Website: <https://www.aveliavilla.gr/gr/>
- **Xylouris Restaurant**
A traditional restaurant website where visitors can view photos of dishes, explore recipes, and make a table reservation. **Website:** <https://www.xylouris.gr/gr>
- **Cretan Tour**
A tour operator website that presents the excursions organized by the company in Crete. Visitors can browse the available tours, create a custom tour based on their preferences, and view the company's existing material and content. **Website:** <https://www.cretantour.com/en>
- **Transfers Heraklion**
A transfer and private tour website offering premium transportation services across Crete. Users can book airport transfers in Heraklion, explore available excursions, or create custom travel experiences, all through an easy-to-use booking platform with clear information and pricing.
Website: <https://www.transfersheraklion.com/en>

Personal Projects

- **Messaging App**
A web application for messaging and group creation, supporting real time communication, group management with member controls, and real-time notifications. Built using React/Ionic for the frontend, Node.js for the backend, MongoDB as the database, and Firebase/Socket.IO for real-time functionality. **Website:** <https://aura.annazoi.dev/>
- **My Portfolio**
A personal portfolio website designed and developed to showcase my projects, technical skills, and development experience. Built using React, Next.js, TypeScript, and Tailwind CSS, focusing on clean design, scalability, and fast loading times. **Website:** <https://annazoi.dev>
- **Soap Shop Web Application**
Developed a full-stack e-commerce application using Next.js, React, and TypeScript, styled with Tailwind CSS. Integrated PostgreSQL with Prisma for type-safe database access and data modeling. Built a

responsive client interface with product collections and a contact page, along with an admin panel for managing products and processing customer orders.

Website: <https://latherlab.annazoi.dev/>

- **Digital Wardrobe**

A web application that allows users to digitise their wardrobe by uploading photos of clothing and creating outfits. Users can share clothes with a community and explore other users' styles for inspiration. Developed using React, TypeScript and Chakra UI on the frontend, with NestJS backend and MongoDB for data storage. Website: <https://drobe.annazoi.dev/>

- **Self-Improvement App**

A self-improvement web application that allows users to track personal traits, set goals, and review their progress over time. The platform provides monthly visual summaries on a calendar to help users reflect on improvements and identify areas for further growth. Built using React, TypeScript, and Semantic UI on the frontend, with a NestJS backend and MongoDB for data storage. Website: <https://habitory.annazoi.dev/>

- **Relay**

A forum web application that facilitates user communication through posts and comments. Users can create discussions, reply to others, and engage in threaded conversations. The platform also allows users to update their profile information. Built with React on the frontend and Express on the backend. Website: <https://relay.annazoi.dev/>

- **Youtube Transcript Summarizer**

A web application that generates AI-powered summaries of YouTube video transcripts. Users can log in via Google authentication and submit a video URL to receive a concise summary of the content. The application was built using React, TypeScript, and Ionic on the frontend, with an Express backend and Firebase for authentication, database, and hosting.
